

Ahmed Hisham

Junior Full-Stack Developer · React, Next.js, TypeScript & AI Integration

ahmedhisham1928@gmail.com · +36 70 947 6457 · Debrecen, Hungary · [github.com/ucoi](#) · [linkedin.com/in/ahmed-hisham-03542915b](#) · [Portfolio](#)

PROFILE

Junior Full-Stack Developer and Computer Science Engineering graduate with hands-on experience building React, Next.js, and TypeScript applications, RESTful APIs, and responsive UIs, from database design through deployment. Recently expanded into AI-integrated products, building a voice-based AI interview platform combining LLM-powered content generation with real-time conversational voice agents. Stipendium Hungaricum Scholar, awarded competitively for academic merit.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Java, Python, C

Frontend: React.js, Next.js, Responsive UI/UX Design (Figma)

Backend: Node.js, Express.js, RESTful API Design, Next.js Server Actions

Databases & Auth: MongoDB, MySQL, Firebase (Firestore, Authentication, Admin SDK)

AI & Voice Integration: Google Gemini, Vercel AI SDK, Vapi, Prompt Engineering, Zod

Tools & Workflow: Git, GitHub, GitLab, Branching Strategies, Pull Requests, Agile/Scrum, Vercel

TECHNICAL PROJECTS

ReadyRole — AI Voice Interview Platform | Next.js, TypeScript, Firebase, Vapi, Google Gemini

[github.com/ucoi/Interview_Agent](#) · [Live Demo](#)

- Built a full-stack AI platform that conducts realistic mock job interviews through live voice conversation and generates automated, structured performance feedback.
- Integrated Vapi's voice AI SDK to power two conversational agents: one that gathers interview parameters via voice, and one that conducts the interview using dynamically generated questions.
- Built a Google Gemini pipeline (Vercel AI SDK) to generate tailored questions and score interviews across 5 categories using schema-validated structured output (Zod).
- Implemented Firebase authentication (client + Admin SDK) and a Firestore data layer for interviews, feedback, and users; deployed to Vercel, resolving real production bundling issues.

Fitness Tracker Web App | MERN Stack — Bachelor's Thesis

[github.com/ucoi/THESIS](#) · [Live Demo](#)

- Built a full-stack fitness tracking app (3-month thesis) with a 5-page responsive interface and 10+ RESTful API endpoints for auth, activity logging, and progress tracking.
- Developed dynamic dashboards with progress charts and calorie-tracking visualization.

NileFlix — Streaming Platform UI | React.js

[github.com/ucoi/NileFlix-FrontEnd](#)

- Led front-end development in a 4-person team, using feature branches and pull requests while resolving merge conflicts to build a 4-screen responsive UI from Figma design specs.

Weather Forecasting App | React.js, TypeScript, Node.js, Express.js, MongoDB

[github.com/ucoi/weatherApp](#) · [Live Demo](#)

- Integrated a public weather API with global city coverage and built a responsive UI for real-time weather data display.
- Migrated the entire codebase from JavaScript to TypeScript, improving type safety and code maintainability.

PROFESSIONAL EXPERIENCE

Engineering Project Collaborator | Eco Pro Factory

May 2026 · Debrecen, Hungary

- Worked alongside a Korean engineering team on the construction, maintenance, and troubleshooting of cleanroom contamination-control systems for a battery manufacturing facility.

Quality Control Assistant | Vitesco Technologies (Schaeffler Group)

Aug 2024 – Jan 2025 · Debrecen, Hungary

- Inspected 60+ manufactured parts daily against QMS standards while maintaining full production throughput, catching defects before downstream processing.
- Applied data-driven workflows to track defect patterns, supporting continuous improvement in production quality compliance.

EDUCATION

BSc Computer Science Engineering | University of Debrecen

Sep 2022 – Feb 2026 · Debrecen, Hungary

- Relevant coursework: Data Structures & Algorithms, Databases, Web Development, Operating Systems, OOP.
- Stipendium Hungaricum Scholar — competitive government merit scholarship for international students in Hungary.
